Statement of Biocompatibility

Part Number F17315

OFS certifies that optical glass and polymer components used to produce the optical fiber F17315 (*800 glass, 880 glass, 910 coating, and 1200 buffer*) are the same materials used to manufacture OFS optical fiber F18941 (*550 glass, 600 glass, 600 coating, and 750 buffer*) which has been tested for biocompatibility to USP Class VI and ISO 10993 by an independent testing laboratory. The F18941 has a blue colorant in the buffer in addition to the clear ETFE.

Summary Certificates of the test results issued by the testing laboratory confirming the biocompatibility of the components of optical fiber F18941 are on file at OFS and available by request.

Complete copies of the original test reports on these products can be provided upon request.
