

OFS Carrollton Facility Up and Running After Weekend Shutdown for Cleaning

Carrollton, Georgia, March 30, 2020 - Last week, on March 27, 2020, OFS temporarily suspended production at its Carrollton, Georgia cable facility for the weekend after a worker there tested positive for the coronavirus disease COVID-19.

"The plant was closed over the 2-day weekend to perform precautionary deep cleaning of manufacturing, office and common spaces out of an abundance of caution. These actions were undertaken to help ensure the well-being of employees, their families, and the local community," said Steven Beasley, General Manager Carrollton Cable Facility.

OFS is pleased to announce that its Carrollton cable facility opened on schedule today at 7:00 a.m. EST to re-start production of its fiber optic cables.

OFS optical fiber, cable and connectivity businesses have been categorized as a critical infrastructure industry by the U.S. Department of Homeland Security, as noted in its March 19, 2020, Memorandum on Identification of Essential Critical Infrastructure Workers during COVID-19 Response. OFS directly supports key industries including telecommunications, medical, transportation, energy and defense.
