LaserWave® Wideband Optical Fiber
OM5 multimode fiber optimized for short wavelength division multiplexing (SWDM) applications

Features

- Meets TIA-492-AAAE and draft IEC-60793-2-10 A1a.4 standards for wideband fiber
- Designed for SWDM applications (850 nm to 950 nm)
- Uses SWDM to increase transmission capacity by up to 400%
- Completely backward compatible with existing OM4 networks and applications
- Manufactured using the industry’s tightest geometric control

Benefits

- Supports today’s applications including 100 Gb/s Ethernet and 32 GFC
- Ready for next-generation wideband networks
- Duplex transmission of 100 Gb/s using SWDM technology
- Supports 400 Gb/s transmission over 8-fiber links

Applications

LaserWave WideBand Multimode Fiber provides outstanding performance for fiber management systems in:
- Data centers
- High-performance computing centers
- Enterprise local area networks
- Storage area networks
- Central offices

Overview

LaserWave WideBand Multimode Fiber is a 50 micron (μm) laser-optimized multimode fiber designed to help meet the demanding requirements of today’s OM4 networks, as well as next-generation OM5 short wavelength division multiplexing (SWDM) applications.

This wideband fiber extends the ability of conventional OM4 multimode fiber to support multiple wavelengths using SWDM. Unlike traditional multimode fiber, OFS LaserWave WideBand Fiber is designed to support traffic over a range of wavelengths from 850 nm to 950 nm. This capability allows multiple lanes of traffic over the same strand of fiber, helping to significantly improve the bandwidth capacity of multimode fiber while also maintaining its cost advantages for short-distance applications, up to 300 meters or more.

Building on the history of LaserWave 550 (OM4) Fiber, LaserWave WideBand Fiber meets TIA-492AAAE and IEC 60793-2-10 A1a.4 requirements for OM5 wideband fiber while maintaining backward compatibility with OM4 specifications. This fiber supports four wavelength 100 Gb/s applications, while providing future proofing for tomorrow’s 400 Gb/s and higher speeds.

LaserWave WideBand Fiber offers low bending loss throughout the entire operating window, while maintaining excellent long-term fiber strength and reliability.

Typical: 0.6 lbf (2.7 N) |

## Optical Characteristics

### Attenuation

- at 850 nm: ≤ 2.2 dB/km
- at 1300 nm: ≤ 0.6 dB/km

### Laser Bandwidth/EMB

See Transmission Characteristics Table

### Transmission Distance (Link Length) Support

See Applications Support Table

### Attenuation at 1380 nm minus attenuation at 1300 nm

≤ 1.0 dB/km

### Attenuation Uniformity / Point Discontinuities at 850 nm and 1300 nm

≤ 0.08 dB

### Numerical Aperture

0.200 ± 0.010

### Chromatic Dispersion

- Zero Dispersion Wavelength (λ₀): 1297 ≤ λ₀ ≤ 1328 nm
- Zero Dispersion Slope (S₀): $S₀ ≤ 4(-103)/(840(1-(λ₀/840)⁴))$ ps/nm²/km

### Group Refractive Index

- at 850 nm: 1.483
- at 1300 nm: 1.479

### Backscatter Coefficient

- at 850 nm: -68.4 dB
- at 1300 nm: -75.8 dB

### Macrobend Attenuation

<table>
<thead>
<tr>
<th>Radius</th>
<th>850 nm</th>
<th>1300 nm</th>
</tr>
</thead>
<tbody>
<tr>
<td>100 turns @ 37.5 mm radius</td>
<td>≤ 0.5 dB</td>
<td>≤ 0.5 dB</td>
</tr>
<tr>
<td>2 turns @ 15 mm radius</td>
<td>≤ 0.1 dB</td>
<td>≤ 0.3 dB</td>
</tr>
<tr>

## Environmental Characteristics

### Operating Temperature Range

-60 °C to +85 °C

### Temperature Induced Attenuation at 850 nm and 1300 nm from -60°C to +85°C (5 24-hour cycles)

≤ 0.1 dB/km

### Temperature and Humidity Induced Attenuation at 850 nm and 1300 nm from -10°C to +85°C, 94% RH (30 24-hour cycles)

≤ 0.1 dB/km

### Accelerated Aging (Temperature) Induced Attenuation at 85°C for 30 days

≤ 0.1 dB/km

### Water Immersion Induced Attenuation, 23°C for 30 days

≤ 0.1 dB/km

### Dynamic Fatigue Stress Corrosion Parameter ($n_{d}$)

≥ 18
## Transmission Characteristics

<table>

</tbody>
</table>

\(^1\) Unless otherwise indicated, application support distances are based on standard total connection plus splice loss of 1.5 dB and cable attenuations of 3.5/1.5 dB/km at 850 nm and 1300 nm respectively. Lower-loss connectors and lower cable attenuations can lead to longer supportable distances. Contact OFS for specific cable attenuation and connection plus splice loss necessary to support a target distance.

\(^2\) Distances assume maximum 1.0 dB total splice/connector loss, maximum 3.0 dB/km cable attenuation at 850 nm, and VCSEL spectral width of ≤ 0.45 nm. 150 meter reach over OM4 as defined by IEEE 802.3ba.

\(^3\) 550 meter reach assuming 3.5 dB/KM maximum cabled attenuation at 850 nm plus 1.0 dB of total connection and splice loss, or 3.0 dB maximum cabled attenuation at 850 nm and 1.3 dB total connection and splice loss. 400 meter reach as defined by IEEE 802.3ae.
