**EXPERIMENTAL SETUP**

100W of laser power is launched into the fiber when bent, excess fiber looped into a diameter of 20 cm

**Reliable laser delivery up to a 5 mm bend\***

HCXtreme Optical Fiber technology addresses the problem of fiber failure due to tight bending of optical fiber under power. This optimized fiber design reduces bend loss and offers superior performance in high power laser delivery application that requires bending.

\* For further details and testing methodology, request a copy of our white paper, entitled "Study of Optical Fiber Damage Under Tight Bend with High Optical Power at 2140 nm."
